

## Managed Perimeter Router

### Who is monitoring your one link to the outside world?

All of your Internet traffic is probably passing through a single router. Is a professional monitoring it 24/7 to make sure your business stays online?

#### **Maintaining Your Network Connection to the Internet**

A business' connection to the Internet is its gateway to the world. Email, inventory, research, orders, customer requests, etc. all flow through your Internet connection. With every connection there is (or should be) a router that manages how your information flows to and from your internal network. Not just a firewall, but a traffic cop that makes sure data is getting to where it belongs.

#### ***The Afterthought of Connectivity***

When a business signs up for a data circuit from a carrier the carrier would many times offer a router as an add in service. They might even offer to monitor the router - to let you know if it went down. Not fix it - just watch it. Those days seem to be coming to a close with carriers realizing that they are not good at the watch and fix end of the business when it comes to customer premise equipment.

The problem is - the router matters. Without it, your critical communications go nowhere and you receive none. Simply placing a no name router on the edge of your network and forgetting about it is not a viable long term strategy for a device that controls all data flowing into and out of your company.

#### ***Managed Perimeter Routers from Mirifex***

Mirifex offers best in class routers from Cisco and will monitor and manage them 24/7. To keep your data flowing we provide:

Router implementation and configuration

24/7 monitoring to make sure it is running and communicating

Log file management to isolate issues before they impact your network

Patch maintenance to secure the latest operating software for your router and make sure it gets applied in a timely manner

Break fix for software and routing issues - remote administration and triage

Overnight depot replacement - we can get a new router in place and configured the next morning if your router is out of commission

Integration with your internal network

Mirifex offers standard configurations so we can size the right one for your connectivity and data needs
